

Populuxe Seed Bank - Current Holdings

April-14-18

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Bean</u>	Monastery	328	54 days from sprout to green harvest. 89 days from sprout to dry harvest. Great for both uses, nice nutty flavour green. Great short season variety	Likely originally Vermont Cranberry, but grown by the Trappist monks in Tracadie NS since the 1930's and now genetically distinct.	H
	Mrocumière	332			H
	Prince Purple	329			OP/H?
<u>Bean (Bush)</u>	Borlotto Lingua Di Fuoco (Borlotto Fire Tongue)	72	Good for fresh and dried use, white pods streaked with red/orange. Beans are tan speckled with dark red. 50-60 days. High yielding variety.	Italian heirloom.	H
	Canadian Wonder	264	Red kidney bean with a small white eye. Early as a snap bean, but primarily used as a dry bean. Very productive, smaller bush plant. 95 days to dry.	Listed in the Ely seed catalogue from 1881: "This dwarf bean is of such great value as to fully justify the name "Wonder". In growth the plant is dwarf and compact. The pods, produced in marvellous (sic) abundance, are very tender, delicate in flavor, of beautiful shape, and grow from 12 to 16 inches in length. For string beans it is sure to become a great favorite, while for fresh shelled beans (cooked like Lima Beans), hardly any other variety can approach it in rich, delicious flavor and handsome appearance." Believed to pre-date that, however no further documentation is verified. Canadian heirloom.	H
	Ireland Creek Annie	204	Bush type bean, excellent for soups and dry uses. 24" growth. Good producer. 70-75 days.	English heirloom grown since the 1930s on Ireland Creek Farm in British Columbia.	H
	Koala	293	Plant produces thin pods, plant size about up to 12".		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Bean (Bush)</u>	Magpie (Magpi)	221	Bush-type bean. Reportedly later variety. Black and white speckled, slightly elongated bean.	Introduced by the Carter Seed Company from France in 1913 OR 1909 by Sutton Seeds (conflicting reports).	H
	Norwegian Brown	262	Plant produces good, early harvests of gold brown soup beans with a white eye. 75 days (dry). Should be a bush variety. Heavy yields.		H
	Pepa de Zapallo (Tiger Eye)	302	Amber yellow dried bean with maroon swirls. Best for dry use, thin skinned for easy drying on the vine. Bush habit. 80 days.	Originally from South American (reported).	H
	Speckled Algonquin	211	Dry bush bean variety, light tan and red speckled beans. 95 days to dry.	History is spotty at best on this variety.	H
	Swedish Brown	209	Plant grows approximately 15" high, produces pods of brown beans used primarily for dry use.	Original seed was brought to Canada by Swedish immigrants who settled in Ladner, BC and Westham Island. Seeds originally brought in the 1800's.	H
	Thibodeau du Comté de Beauce	267	Excellent short season variety producing excellent harvests of straight green beans dashed with purple early in the season. Bean in tan in colour with burgandy flecks. Produces well even in cool, wet conditions. 45 days for snap. 70 for dry.	Documented back to Comte de Beauce in Quebec. Old Canadian heirloom.	H
	<u>Bean (Pole)</u>	Brecon Black	333	Tall, strong plants produce long green pods with black beans.	Brought to Ireland from Wales in 1945 by Dr. Robert Davies from Brecon, South Wales and grown in Ireland ever since. Donated to ISSA by Urusula Burke, a neighbour of the Davies family.
Cherokee Cornfield		218	Small beans range from black to olive to cream to salmon to white, with striking black markings.		H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Bean (Pole)</u>	Emelia's Italian Pole (Auntie Vi's Italian Pole)	186		Emelia Fulla brought the seeds to Canada when she immigrated from Italy in 1911. She was from St Peitro, Udine, Italy. The name 'Auntie Vi' was given to it by Annette Barley, who was given the beans in 1965. Vi stands for "Vancouver Island". The bean has been grown around Nanaimo for over 100 years. In 2015 A Barley renamed the beans 'Emelia's Italian Pole' in honour of Emelia Fulla.	H
	Gramma Walter's	210	Plant produces good yields of white and dark red mottled beans, used primarily for dry uses, but can be used fresh. Approx. 5 seeds per pod, light pink pod. Grows approx. 7 ft. tall. 60 days for fresh use, 80 days for dry.	Plant reportedly comes from the Pacific Northwest, although no history on Gramma Walter's can be found.	H
	Grandma Nellie's Yellow Podded	187	Early maturing variety, 60-65 days. Moderately productive. Bean will start in colder soil, making it excellent for shorter and colder climates. Dry bean. Shatters when beans are ready.	Given to Nellie Chernoff, of Kamsack, Saskatchewan, by a Russian lady immigrant friend.	H
	Irish Connors (Irish Conners)	134	Moderately large plants (approx. 6ft long), white flowers, pods are approx. 7-8" long with 6-8 beans per pod. Three pods per shoot. Beans are a chestnut brown colour and are good for snap and dry uses. Doesn't like high heat, does better in moderate temperatures. Early producer, ready for drying stage at only about 70-80 days.	Ken Conners was born in Ireland in 1898. His family immigrated to Boston, Massachusetts in 1900, and then again moved to New Brunswick, Canada in 1907. They made their way out west and settled in the Vancouver, BC area. The family is still around, but in the interior of BC now, where they run an antique store and still to this day grow these beans that followed them around their journey in North America.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Bean (Pole)</u>	May Flower	115	Best use as snap beans, but can be used as dry. Pods produce short squarish beans, off-white in colour flecked with a burgandy red that a cumulates at the eye. 100 days to maturity	Said to have been brought over with the Mayflower in 1620, however it shows a lot of resemblance to 'Colorado River Bean'. Might simply be a renamed variety.	H
	Mr. Tung's	74	10" pods, 8-10 beans per pod. White/khaki colour, about 0.5" long. 7 pods per shoot, 99% fruit set. White flower, good dried and fresh, with a slight buttery flafour. 70ish days. Vines are 8-10ft long.	Heirloom originally from China, brought over by the Tung family when they moved to Longbeach, Kootenay Lake, BC.	H
	Musica	73	Large flat pods 9-12" long, 6-8 beans per pod. White beans, about 0.5" long. 3 pods per shoot, about 85% fruit set. White flowers. Good dried and fresh. 60-70 days. Vines about 7-8ft long.	Spanish heirloom.	H
	Oma's	133	Large vining variety, vines approximately 10ft high. Huge pods, about 12" long produce large white beans (approx, 7-9 per pod). Good for fresh or dried use.	Original gardener that sent them to the bank said that her grandmother brought these beans over from Germany with her when she immigrated in the earlier part of the 20th century. They have been in her family ever since.	H
	Oregon Giant	113	Plant produces large, flat pods and kidney-shaped beans. Beans and pods are tan with purple striping. Pods are 10" long with 8 beans per pod. Extremely large vines. 70 days for snap beans, 95-110 for maturity.	Thought to originate from the Pacific Northwest. Dated at least to the 1930's, as it was listed in the 1937 McFayden's seed catalogue.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Bean (Pole)</u>	Poltschka	81	8" pods, 6-9 beans per pod. Beans are smaller sized, about the size of a blackeyed pea. Colour is black/dark purple/blue. Excellent as a green bean or as a dried bean. Does moderately well in a hot climate, might produce better in a slightly cooler environment.		OP/H?
	Speckled Cranberry	265	Triple purpose bean. Can be used as a snap bean at around 60 days, green shell bean at around 80 days, or as a dry bean if grown to full maturity. Produces heavy crops of stringless 7-9" pods until the first frost. Pole habit, dry, 60-90 days.	Brought to North America from England around 1825.	H
	Sunset Runner	116	Plant produces distinct pale-peach blossoms, vines reaching up to 6ft. Best used mature, and said to be excellent for freezing and canning. Beans are large, and are black, flecked with lavender-purple. 75 days.		OP/H?
	True Red Cranberry	117	Plant produces good harvests of beans that resemble cranberries - dark red in colour, and about the size and shape of cranberries. Mostly used dried. 95 days.	Said to be originally used by the Abnaki First Nations of Maine, USA.	H
<u>Cotzmatl</u>		174	Sprawling plant produces small 1" orange fruit in a husk. Earthy/fruity kind of flavour. Does well in heat, sets fruit easier in hotter weather. Doesn't like to be too damp. Tender perennial - will tolerate some frosts, but successive hard frosts will kill it.	Rare plant, reportedly grown by the Aztecs.	H
<u>Eggplant</u>	Rosa Bianca	268	Round, light lavender fruit with a delicate flavour. Best picked when they are 6-8" long. Meaty. 75 days.	Italian heirloom.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Fava Bean</u>	Broad Windsor	263	75-85 days. Heavy production. Black and white flowers.	Stated in the Ely seed catalogue of 1881 to be the "celebrated Broad Bean of England". Originally coming to England from Portugal in the 1300's, and grown in North America since the end of the 18th century.	H
<u>Ground Cherry</u>	Cossak Pineapple	112	Similar size and growth of 'Aunt Molly's' but with a pineapple flavour. Self seeds readily, versatile plant, grows well in ground and in containers (but better yields if in-ground). Fruit is about 1/2" in diameter. 70 days.	Said to originate from Eastern Europe.	OP/H?
<u>Melon</u>	Oka	165	Creamy orange flesh, rind is yellow-green and heavily ribbed. 80-90 days.	Bred around 1912 by Father Athanase of the Trappist Monastery at La Trappe, QUE. Oka was a cross of the green-fleshed Montreal Market and Banana.	H
<u>Pea</u>	Blue Pod Capucijners (Blue Podded Pea)	84	Ornamental/edible variety, bright blue/purple pods from silver-grey vines that grow approximately 8ft. Excellent pea for eating the pea pods, fresh shelled pea, or dried pea. 80-85 days	Developed by the Capuchin monks in Holland. Known to date at least pre-1800.	H
	Monk	118	Rough brown in appearance, used almost exclusively for dry purposes.	Traditional variety from the minks in the Netherlands.	H
	Robinson	336	Tall (7ft+) plants produce long slim pods with up to 11 peas per pod. Wrinkled seed, stays sweet even when quite mature.	Donated to HSL by Michael Stanley who has grown the variety since the 1950's. M. Stanley originally received the seed from Mrs. Robinson, who acquired the seed originally from Scotland.	H
<u>Pepper</u>	Czech Black	330	Pepper matures from black to red. Jalapeno in heat, nice big plants, ripened very early. Fruit is approximately 3" long, about 1.5" in circumference.	Czechoslovakian heirloom.	OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Pepper (hot)</u>	Aji Chinchi Amarillo	224	Smaller version of the Ají Amarillo. Yellow fruit, maturing to a deep orange. Mild to medium heat. Excellent for fresh or dry use. 85 days.	Traditionally from South America, heavily used in Peruvian dishes.	H
	Chocolate Habenero	111	Plant produces chocolate brown lantern shaped fruit, about 2" long. 300,000 scoville units, very spicy, and with an excellent smokey/fruity flavour.		OP
	Morocco	337	Sweet but gently hot chili. Up to 3-inch three-lobbed boxy hot and sweet chilli pepper that turns brilliant red when ripe. Plants grow to 3 feet in height. Does well in a greenhouse border or pots.	Found by Adam Alexander in SE Morocco close to Algeria in 1997, and donated to HSL.	
<u>Pepper, Hot</u>	Hinkelhatz	315	Small, 1-2" long red peppers, roughly shaped like a chicken's heart. Bushy rather than upright growth habit, great for containers. Spicy. 85 days.	Grown by the Pennsylvania Dutch since at least the 1880s. Hinkelhatz translates from Penn Dutch to "chicken heart".	H
<u>Runner Bean</u>	Scarlet Runner	217	Green heart-shaped leaves with bright red flowers, produce black and dark purple seeds. Edible when young. 75 days fresh, 115 dry.	Wild perennial in tropical Central America, introduced to cultivated gardens around 1750.	H
<u>Snow Pea</u>	Chinese Giant	212	Plant produces very large, 5-8" pods used for fresh snap pea use. Approximately 6-8 peas per pod. 4 ft. vines. Grows very well on the prairies.		H
	Slocan	75	Large 7ft vines, prolific producer. White flowers. Leaves are green with white splotchy-dot variegation. Does very well in high heat. Excellent for snap pea use, as well as letting mature on the vine to use for dried peas. 50 days for fresh use, 70 for dry.	Heirloom brought by Japanese immigrants (possibly internment camp prisoners?) during WWII to the area. Originally from Japan.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Squash (maxima)</u>	Brode Galeux d'Eysines	183	90 days. Warty winter variety. Very rare, difficult to find.	French heirloom.	H
<u>Squash (moschata)</u>	Musquee De Provence	219	Large, flat 10-15lb fruit that are deeply divided. Mature to a deep dusty orange. Flesh is dense and rich. Good for roasting and pies. Good keeper. 100-110 days.	Heirloom to southern France where, until recently, it was though the variety had become extinct.	H
<u>Squash (pepo)</u>	Tatume	140	Extremely vigorous vining summer squash, best when eaten young as a summer squash (medium to dark green), but can be left to mature on the vine and cured to keep as a winter squash for several months (golden yellow). For eating like a zucchini, harvest is at about 45-50 days, for mature it's about 80 - 90 days. Excellent flavour, very firm. When cured as a winter squash it's reminiscent of spaghetti squash. Needs lots of room to grow, does well with trellising.	Historical Mexican variety.	H
<u>Tomato</u>	Agona Local	170	Compact, semi-determinate plant produces excellent crop of 2-6 oz juicy plum type fruit. Excellent for fresh eating and sauces. Delicious full flavour. Approx 70 days.	Seed donated to PGRC by a Mr. Agble in 1989. Variety originally from Agona, Ghana	H
	Ailsa Craig	259	Good production and good flavour from small 1.5oz round or slightly elongated red fruit. Clusters of 6-8. Regular leaf. Indeterminate. 75 days.	Bred by Alan Balch from a cross of Fillbasket and Sunrise, and introduced in 1912 by the seed vendor Alexander and Brown of Perth, Scotland.	H
	Al's Black	242	Plant produces medium sized, firm black fruit. Early production.	Grown in Saskatchewan in the same family for several decades. Further information is unknown.	H
	Altajskij	312	Red, oblate, pleated fruit. Large plant, good production. Indeterminate. Good fruit set. Regular leaf.	Donated to PGRC in 1986.	OP
	Americke Pyramidni	169			OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Ananas Noir (Black Pineapple)	2	Very meaty beefsteak fruit. Black streaked with green shoulders, Very creamy inside, cannot be kept long after picking. Reportedly came from a stray seed of 'Pineapple', was selected and bred out, although may not be 100% stable yet. Good flavour, sweet with mild acid overtones. Regular leaf. Indeterminate. 85 days.	This tomato appeared in a Pineapple tomato patch and was developed and stabilized by Pascal Moreau, a horticulturist in Belgium. First introduced to SSE in 2003.	OP
	Andrina Dwarf	3	Small cherry tomato, plant reaches on 6" high and can be grown in a 6" pot. Good yields of tiny cherry tomatoes, round and red. Heat delays production. Regular leaf. Determinate. 60 days.	Reportedly originally from Russia.	H
	Anna Russian	291	Plant produces good flavoured red, heartshaped fruit, good for canning and slicing. Fruit weighs 5-17oz each. RL, indeterminate, 75-80 days.	Original seed sent to Craig LeHoullier in 1989 by Brenda Getty Hillenius of Corvallis, Oregon. She received the variety from her grandfather, Kenneth Wilcox. Kenneth received the seeds from a Russian immigrant in the 1980s, who was sent the variety by his family, who lived in Russia. Craig LeHoullier introduced it to the SSE Yearbook in 1989.	H
	Antonovka	121	Kind of spindley plant, didn't seem to like the cold, wet weather of a La Nina year, but did take off once weather warmed up. Excellent flavour, oblate beefstake type fruit. Dark red with darker red/brownish/greenish shoulders. Good balance between rich and tart taste. Indeterminate. 75-80 days. Regular leaf.	Seed donated to PGRC in 1984 from Ontario.	OP/H?
	Armenian	4	1lb bi-coloured oblate fruit with yellow/orange skin and flesh. Slight red marbling sometimes in the flesh. Beefsteak-type fruit.	Originally from Armenia, as per Charlotte Mullens of West Virginia, who was the original source of the seed in 1990. Regular leaf. Indeterminate, 75.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Aunt Ruby's X (PSB-5)	93	Large, vigorous plant produces 8-18oz yellowish green beefsteak type fruit. Meaty with sweet rich flavour, said to have a buttery texture. 80 days. Indeterminate. Regular leaf.	First introduced in the SSE 1993 Yearbook by Bill Minkey of Darien, Wisconsin (WI MI B). Bill Minkey received the seed from Nita Hofstrom of Clinton, Wisconsin, whose aunt, Ruby Arnold of Greeneville, TN, grew it for years. The seed originally came from Ruby Arnold's German immigrant grandfather, and Ruby simply called it 'German Green' tomato. Bill Minkey asked Ruby for permission to rename this variety and he called it 'Aunt Ruby's German Green' after Ruby Arnold.	H
	Auriga	200	Deep apricot fruit with orange interior. Fruit approx 2.5" in size. 75 days. Regular leaf.	Reportedly from Switzerland	OP/H?
	Aviuri	152	Red fruit with orange/bronze striping. 4-6oz fruit. Regular leaf. Indeterminate. 78 days.		OP/H?
	Azoychka (Azochka)	5	Good sized 6-12oz fruit, moderate production in high heat. Lemon yellow, very non uniform. Indet., RL plant. Likes to vine upwards. Very sweet, fruity and low acidic flavour. 75-80 days.	Russian heirloom, 'Azochka' was a common Arabic female name in Russian in the mid-20th century.	H
	Beauty King	6	Large, oblate beefsteak type, non uniform in shape. Bicoloured red and orange, with yellow innards. Most likely a sport from 'Big Rainbow', and may not yet be entirely stable. From Brad Gates of Wild Boar Farms. Reported 1 large (1lb) fruit/cluster, the rest will be smaller. Regular leaf. Indeterminate. 83 days.	Most likely a sport from 'Big Rainbow', and may not yet be entirely stable. From Brad Gates of Wild Boar Farms.	OP
	Black & Brown Boar	8	Produces 3-4oz globular fruit, brown with green striping. Sets very well in hot weather, good flavour. Regular leaf. Indeterminate. 70-75 days.	Discovered and stabilized by Brad Gates, Wild Boar Farms, Vacaville, CA. It came from a row of Green Zebra plants at Brad's farm.	OP

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Black From Tula	9	RL, indeterminate. Very flavourful, earthy, acidic, yet somewhat sweet complex flavour. Big heavy 3" diameter fruit. Family heirloom from Ukraine. 80 days.	Family heirloom from Ukraine. This variety was imported from Russia (Marina Danilenko) by Seed Savers Exchange and offered in the SSE 1996 Yearbook	H
	Black Krim	223	Large 8-16oz fruit, dark purple/brown/black with darker shouldering. Excellent flavour. Regular leaf. 80 days.	Ukrainian heirloom from Crimea region of Black Sea (Ukraine). First offered in the USA in the SSE catalogue by Lars Olov Rosenstrom of Bromma, Sweden in 1990.	H
	Black Oxheart	320			OP/H?
	Black Pear	79	Medium sized potato leafed plants produce good yields of brown-black pear shaped fruit (about the sized of a small pear). Nice smokey flavour, slightly acidic, and not very sweet. Some slight green shouldering. No cracking or splitting, even under drought conditions. Not a dry tomato, but still makes a nice sauce. Good for fresh eating. Indeterminate. Potato leaf. 75-80 days.	Suzanne Ashworth located the seeds in Moldova.	OP/H?
	Black Plum	10	Plum shaped mahogany/black fruit. 2" in diameter, very productive, with good flavour. 2oz fruit. Regular leaf. Indeterminate, 75 days.	Russian variety acquired by Seed Savers Exchange in the early 1990s from Marina Danilenko of Moscow, Russia.	H
	Black Sea Man	167	Hearty determinate plant, approx. 3-4ft high. Produces good yields of black/brown fruit with excellent flavour. Good to excellent yields. Potato Leaf. 75 days.	Russian origin	H
	Blondkopfchen	11	Small lemon yellow cherry, RL, indet., produces in large clusters on a large vine. Mild, sweet flavour. 70-75 days.	"Blondkopfchen" means "Little Blond Girl" in German. obtained from the Gatersleben seed bank in Germany in the late 1980s.	OP/H?
	Bola Macizo	207	Meaty dark pink/red fruit. Good flavour.	Name translates to "solid ball" from Spanish.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Bonito Ojo	230	Uniform 2.5oz, 2" globe-shaped fruit. Very sweet. Produces in trusses of 7-9 fruit. Very good production. Thin skin. Regular leaf. Determinate. 75 days.		OP
	Bramki	12	Red oblate fruit, up to 1lb. Good heat tolerance, good tomato flavour. Regular leaf. Indeterminate. 75 days.	Heirloom of Polish origin.	H
	Brandywine (Maylor Roth's)	239	Rare selection, light orange fruit. Beefsteak type with some ridges. Regular leaf. 80 days.	History is unclear - might not actually be related to Brandywine.	OP/H?
	Brandywine, Red	317			H
	Bunte Pflaume	278	Tall plant produces small to medium sized (2-6oz) green/black bicoloured fruit that are beefsteak shaped. Very good flavour, does not keep well.	May not be original, as they are not plum shaped. Name means 'Colourful Plum' in German. May not be stable.	OP
	Calabacito Rojo	149	Plant yields excellent amounts of oblate, heavily ruffled fruits that are pinkish/light red in colour. Excellent sweet taste. Is said to do well in hot climates. Regular leaf. Indeterminate. 75 days	According to William Woys Weaver, it is a documented very old heirloom in Philadelphia gardens (1795) (cannot find direct documentation of this however). Seed was collected in Chiapas State (Mexico) in 1991.	H
	Canadian Dwarf	323	Good producer, although later for a smaller determinate plant than one would expect. Nice blemish free fruit with classic tomato flavour. I grew this one in a 5 gallon pot, and think it would produce even better in-ground. Approx 3 lbs per plant.	First offered in SSE 2007 yearbook by Michael Gunn of Pasadena, TX, USA, who originally received the seeds from Jennifer Hutson of Kingston, Ontario.	OP/H?
	Charlie's Green	324	Great tangy/fruity flavour, nice strong plant. Resistant to cracking and splitting, even during downpours and irregular moisture levels. Some fruit is more smooth while others will be quite irregular. Regular leaf. Indeterminate.		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Cherokee Purple	216	Plant produces brown/black/purple 6-10oz smooth fruit with green shoulders. Highly prized for its flavour, only moderate production. 85 days. Regular leaf. Indeterminate.	Cherokee Purple was sent to Craig LeHoullier by John D. Green of Sevierville, Tennessee, in 1990 as an unnamed variety. The original letter sent with the seeds that describes all that is known of its history is referenced here [1]. Mr. Green got the variety from a woman who, in turn, received them from her neighbor. The neighbor claimed that they have been in their family for 100 years, originally receiving them from the Cherokee Indians. Craig named the variety and listed it in the SSE yearbook the year after he first grew them (1990). He also sent seeds to Southern Exposure Seed Exchange, then, a few years later, Johnny's Selected Seeds.	H
	Chocolate Stripes	145	Fair production of large, 8oz mahogany bicoloured fruit that is heavily striped with dark green. Good flavour, will split with inconsistant watering. Regular leaf. Indeterminate. 75 days.	Developed by John Siegel of Covington, Ohio, from a cross between Schimmeig Creg and a pink beefsteak. Introduced to SSE by Al Anderson of Troy, Ohio (OH AN A) in 2007	OP
	Chocolate X (PSB-4)	301	Round, spherical fruit on a hardy plant. Yellow skin and flesh. Regular leaf. Approximately 75 days. Very good flavour.	Natural cross found in my garden in 2015 - sprung up between where a yellow pear and a Chocolate Stripes was, so I believe those are the parents.	OP
	Clear Pink Early	297	Plant produces excellent harvests of 3-6oz pink fruit, with a good sweet flavour. Juicy, resistant to heat. Spherical or slightly elongated shape. 60-70 days, RL, determinate. *** my seed was much later, heat delayed production, but production was still very good. Ripened well off the vine in a cool location after frost.	An old Russian variety, introduced to SSE in 1995 along with Cosmonaut Volkov Red. The original Russian name was lost.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Colorado Grueso	176	Oblate bi- or tri- coloured fruit with an uneven pleated shape, smallish plant, but indetermiante. Early maturing.	Collected originally from Argentina by the USDA in 1937, then obtained by a collector in Alberta, and ultimately donated to PGRC in 1967.	H
	Coracao di Boi	16	Red oxheart variety, large plant with wispy regular leaf foliage. Good balanced flavour, excellent for fresh, cooking, and canning uses. Average fruit weight about 10oz, 3" in diametre. Irregular watering produces some radial cracking. Loves hot weather, suffers a bit in cool, wet weather. 80 days. Regular leaf. Indeterminate.	Very rare, heirloom Portuguese variety. Portuguese name literally translates to "heart of the ox".	H
	County Agent	296	Plant produces good harvests of irregular/pleated red fruit, 6-16oz each. Good flavour, hot weather delays ripening. RL, indeterminate, 80 days.	Seeds originated from an Oklahoma County Agent.	H
	Coyote	172	Large, sprawling vines produces prolific yields of yellow .5" fruit, approximately 1-2gr each. Regular leaf. Indeterminate.70 days	Wild variety from Mexico.	H
	Creole	154	Uniform and smooth pink/red fruit. Early production.	Collected from Georgetown market, Guyana, Oct. 10, 1934.	H
	Cuban Black	234	Produces good yields of 6oz, oblate brown/dark red fruit. Some fruit heavily ribbed, while others are smoother and more uniform. Good flavour. Regular leaf. Semi-determinate. 75 days.	Russian variety. Original seed obtained from the former USSR.	OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Cuostralee	95	85 – 90 days. Indeterminate. Heavy set of 2 pound, slightly oval, blemish-free fruit. Greatflavour, one of the best red tomatoes you'll ever taste.	It is a French family heirloom obtained by Craig LeHoullier and Carolyn Male in an extensive sharing of seeds in 1992 with Norbert Pairerra of Hellimer, France. Mr Pairerra sent Craig and Carolyn letters with a handwritten list of hundreds of varieties of French named OP tomatoes. They selected those that sounded most interesting, and growouts started the season after they were received.	H
	DaCosta's Portuguese	193	Ind. RL plant. High yield of ribbed light pink fruit, approx. 1lb ea.	Named by Dan & Val McMurray. They picked the seeds from a sandwich in Portugal.	OP/H?
	Delicious	17	Large, meaty scarlet red fruit with few seeds on a regular leafed plant. This particular variety still holds the Guinness Record for largest tomato (at 7lbs), although fruit is much more likely to be in the 1-2lb range. Fruit can vary between globe-shaped and more irregular ribbed-shape. Resistant to cracking. Indeterminate, 85 days	Introduced by Burpee in 1964 after years of selection from 'Beefsteak (Crimson Cushion)'.	H
	Detenicke Salatove	123	Plant produces uniform, red globular fruit. Dry flesh, good for a sauce or fresh eating. No cracks at all. 75 days. Regular leaf. Determinate.	Donated to PGRC in 1984 by Smithfield Experimental Farm in Trenton, ON.	OP/H?
	Dingwall Scotty (Ding Wall Scotty)	18	Narrow, upright, heirloom plants producing clusters of 3 to 4, 2-inch, round, red tomatoes with rich flavors and just the right touch of acidity. Regular leaf. Indeterminate. 75 days.		OP/H?
	Don Juan	104	Deep pink fruit with pale yellow striping, firm oval paste-type tomato, about 5cm in diameter. Plant reaches 2-5" high. Rugose leaves. Determinate. 75 days.	Commercial open pollinated variety from Russia.	OP

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Donskoi	206	Large red heart shaped fruits, approx 13-16 oz (largest at 2lbs). Good flavour.		OP/H?
	Dr. Wyche's Yellow	19	Large irregular deep yellow/orange fruit. Pomegranate shape inside, full of cavities. Sweet, fruity, juicy, very flavourful and delicious. Heat resistant. Large beefsteak type fruit. 85 days. RL, indeterminate.	Originally from Dr. Wyche, who owned a circus and bred this tomato.	H
	Dubrava	132	Very sturdy strong plant, does well in high heat and cooler temps. Delicious 2-4" red oblate fruit, very tangy - they tasted like they've already been salted. Determinate. 72 days. Regular leaf.	Russian commercial variety. First offered in the Seed Savers 2007 Yearbook by Val and Dan McMurray of Wynndel, BC, Canada (B.C MC D), who got seeds from Natalia Ochagova in Michigan.	OP/H?
	Dwarf Wild Fred	288	Plant produces excellent harvests of black/purple beefsteak-like fruit with excellent flavour. Fruits are 6-12oz fruit, rich and smokey flavour. RL (rugose), indeterminate, 70 days.	Developed in the 2006-2011 by the members of the Dwarf Tomato Project from a cross between Carbon with New Big Dwarf made in 2006 by Bruce Bradshaw, and named Sleazy. his variety was selected and named by Craig LeHoullier after his father Wilfred, from a humorous misspelling of his name in a church bulletin. First offered commercially by Tomato Growers Supply in 2011.	OP
	Early Kus Ali	162	Small to medium sized plant, oblate fruit. Mid season production.	Obtained at the Botanical Garden, Peiping, China, Feb.24, 1931. Donated to USDA in 1931	H
	Egg Yolk	294	Plant produces bright yellow cherry-sized fruit, approximately the colour and size of an egg yolk. Reportedly heat tolerant. Large vines. RL, indeterminate. 75 days.	Developed by Larry Pierce of Missouri from a sport he found growing in his garden in Moldovan Green tomato patch.	OP

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Eiförmige Dauer	191	Ind. PL. Pink, oblate fruit, growing in clusters of 6-7. Fruit weighs approx 2-4 oz ea. 80 days.	Heirloom from Germany. Introduced to North America by Reinhard Kraft.	H
	El Nano	131	Excellent sturdy plant, grows about 3-3.5ft high. Early producer of medium sized red pleated fruit. Fruit is extremely tasty, an excellent sweet flavour with a full body. One of the best tasting reds I've had! Seems to do well in cooler and higher temps, it was the first to produce in a La Nina year on the coast. Started flowering again near the end of the season when it had warmed up quite a bit. Excellent production, would be good for shorter seasons, and containers. Regular leaf. 68 days.	Original seed acquired by PGRC from from a market in Argentina in 1965.	H
	Elizabeth	237	Produces red tomatoes, 2 oz uniform fruit. Very large, strong plants, requires heavy staking. Excellent in a greenhouse.	A family heirloom from Mike Stefancsik.	H
	Elsó Termes	308	Determinate, red fruit. Regular leaf. Early maturity.	Donated to PGRC in 1983.	OP/H?
	Eva Purple Ball	270	Plants produce pink spherical fruit with sweet flavour. RL, indeterminate, 70 days.	This variety was brought to the U.S. from the Black Forest region of Germany in the late 1800s by the family of Joseph Bratka of Elmwood Park, New Jersey.	H
	Fantome Du Laos (Ghost of Laos)	21	RL , indet. Plant produces large yields of 6-12oz pale yellow/white fruit. Flavour leaves a lot to be desired, but it's an interesting history and interesting to look at. Very pretty. Good keeper, which is also a bonus, can be kept several months under the right conditions. 80-85 days.	There's a fable with this tomato: when it glows fluorescent green, tomatoes are afoot. As the name would suggest, it's thought to originate from Laos.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Fargo (Fargo Yellow Pear)	105	Fruit is similar to 'Yellow Pear' in size and shape - but reportedly grows on a shorter vine while producing the same amount of fruit.	Commercial heirloom variety, introduced by McFayden's in 1937.	H
	Ferris Wheel	139	Good production of large, pink oblate beefsteak-type fruit, on average ranging 12-16oz (occasionally up to 32 oz). Slightly sweet, rich flavour. Regular leaf. Indeterminate. 75-80 days.	Originally introduced to the market by Salzer Seed Co. in 1898.	H
	Feuerwerk	245	Plant produces red fruit with yellow mottling/stripes, 4-7oz fruit with a globe shape. Good flavour. 85 days. Regular leaf.	Heirloom from Germany. Translates to "firework"	H
	Forme du Coeur	290	Plant produces red heart-shaped fruit, medium sized. Meaty fruit. RL, determinate, 65 days.	From Quebec. Potentially 'Quebec 473', bred by Roger Doucet, of Agri-Food Canada. Detailed info: https://potagersdantan.wordpress.com/2011/01/24/la-tomate-forme-de-coeur/	OP/H?
	Frühe Liebe (Early Love, Early Love of Quedlinburg)	83	Very early, 4-5' plant, produces 2-4oz red heartshaped fruit. Mild sweetness. Indeterminate, potato-leafed, 50-60 days.	Variety from Quedlinburg, saved by IPK Gatersleben.	H
	Fryerfrins Borghese	129	Extremely hardy plant, excellent producer even in not great conditions. Produces dusty-red round uniform fruit approx. 2" in diameter. Good for fresh uses. Regular leaf. Indeterminate. 75 days.	Donated to PGRC in 1984.	OP/H?
	Fuzzy Bomb	106	Plant produces good yields of beefsteak type oblate fruit, deep red in colour. Plant has a slight fuzz over all of it (hence the name). Fruits are approx 12-16 oz. Late season. Indeterminate. Potato Leaf. 88 days	Developed by Tadd Smith, Franklin, NC.	OP

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Garden Lime	127	Medium sized plant produces heavily bifurcated fruit, very irregular. Fruit is a medium green colour, edging into yellowish tints when ripe. Approx. 8oz per fruit. Juicy, and very tasty, one of the best tasting green varieties with a very full flavour. Does better when it doesn't receive too much water, doesn't like cold weather a lot. No cracking or splitting. 80 days. Regular leaf. Indeterminate.	Donated to PGRC by a German source in 1992.	OP/H?
	Gardener's Delight (Sugar Lump)	22	Medium sized cherry fruit, red, acidic and "old-time" tomato flavour. Indeterminate, RL, will bear until frost. Produces in trusses. 70	Bred by Paul Tellhelm and introduced in 1950-1951 by Ernst Benary Samenzucht (formerly of Erfurt, East Germany; now Hann Muenden, Germany). It was named "Benary's Gartenfreude, Hochzucht". * Offered commercially by Jung Quality Seed, Randolph, Wisconsin in 1960 as Jung's Sugar Lump.	H
	Garten Freude	135	Bushy, sturdy medium sized plant. Needs hardening off before being placed outside, as it seems to suffer from shock easily. Outside, it did well, needed proper warmth to start flowering. Once the heat came it produced like crazy, and continued producing until hard frost. Plant produces round, red pingpong sized tomato, red in colour, 1-1.5" in diameter. Nice full flavour with an acidic bite. Regular leaf. 80 days. Semi-determinate.	Donated to PGRC in 1983.	OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	German Cascade	23	RL, indeterminate plant. 4ft in height. Golf ball size round red brilliant red fruit. Earthy flavour, VERY tasty, with good acidic bite. 85-90 days. Doesn't tolerate heat too well. Moderate production in a really harsh summer. Produces in bunches of 3-5 fruit per.		OP/H?
	German Striped (Striped German)	316			H
	Gezahnte	321			H
	Giant Belgium (Giant Belgian)	102	Large 2lb pink fruit, oblate beefsteak shape with reported excellent flavour. Indeterminate. Regular Leaf. 90 days.	Exact origins unknown - claims are that it's an heirloom from Ohio.	H
	Giant Tree	24	1lb+ large pink beefsteak-type. Vines can reach up to 18ft. Indeterminate, 90 days.		H
	Gigant Purelesa	305	Plants produce large beefsteak, ribbed fruit with pinkish/purplish skin. 9-14 oz, 5" in diameter. Meaty, acidic taste. Early for a larger beefsteak-type. Regular leaf, indeterminate. 75 days.	Russian heirloom tomato from Tamara Yaschenko's collection. Introduced to North America via Tatiana Kouchnareva in 2007 through the SSE catalogue after a trade with Tamara Yaschenko in 2006.	OP/H?
	Gigante de Avila	254	Strong plant, with with large red fruit. Excellent flavour. Some blossom drop. Red colour. Very late.	Spanish for 'Giant from Avila'	H
	Glasnost	25	3" smooth oblate red fruit, very meaty with excellent flavour. Indeterminate. Regular leaf. 75 days.	Variety from Siberia	OP
	Gold Ball (Livingston's Gold Ball, Golden Ball)	276	Plants produce excellent yields of golden yellow fruit, approx 1.5-2oz each. More sweet than tart flavour. RL, indeterminate, midseason.	Developed by A.W. Livingston and introduced commercially in 1892.	H
	Golden Egg	269	Bright yellow, oval fruit, approx 1" in diameter. 70 days. Regular leaf. Indeterminate		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Golden Girl	213	Plant produces yellow fruit.		H
	Goldman's Italian American	101	Squat, pear-shaped and heavily pleated fruit, which have an almost-bloody intense red colour when ripe. Thick flesh is excellent for sauces and preserves. Excellent yields. Regular leaf. Indeterminate. Mid- to late-season.	De-hybridized from an Italian variety. Amy Goldman brought the seed back after she found it at a vegetable dealer in Italy.	OP
	Goose Creek	28	Red globular fruit, about 6-8 oz in size, with reported very good production. A rarer variety. Regular leaf. Indeterminate, 75 days.	Family heirloom from California, USA. Some date it to be from the early 1800's, but history shows there were no smooth tomatoes at that time, so the actual date is unknown.	H
	Graf Zeppelin	130	Hearty plant, good production of very uniform round red fruit approx 2" in diameter. Excellent choice for a market tomato. Good balanced flavour. Regular leaf. 80 days. I saw indeterminate growth, but PGRC lists as determinate.	Donated to PGRC in 1983 from a source in Ontario.	OP/H?
	Green Grape	96	Large, strong plant, produced clusters of 8-9 grape tomato type fruit. Green, turning to yellowish green when ripe. Approx. 1oz in weight. 80 days. Regular leaf. Indeterminate.	Bred by Tom Wagner of Tater Mater Farms and released in 1978. Cross of several heirlooms, one of which is 'Evergreen'.	OP
	Green Sausage	222	Elongated 2-3oz green fruit with dark yellow-green stripes. Paste type, sweet flavour. Regular leaf. Determinate. 80 days.	Bred by Tom Wagner of Tater Mater seeds. Originally bred under 'Green Sleeves' name.	OP
	Green Zebra	26	Heavily producing plant, fruit is green streaked with yellow when ripe. Regular leaf. Indeterminate. 80 days.	Non-heirloom, OP. Originally bred in 1983 by Tom Wagner of Redmond, Washington, USA, and was first offered in his Tater-Mater Seed Catalogue.	OP

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Gregori's Altai	27	Large pink beefsteak type fruit, sweet with good flavour. Good production, 10-16oz fruit. Indeterminate. Regular leaf. 80 days.	Heirloom from Russia, the Altai Mountains.	H
	Grosse du Gers	325	ice tomatoey flavour, medium to firm ? fruit. Really good for fresh eating. Took quite a while from fruit set to ripening, but that might have been due to the heat. Fruit shape is kind of a cross between oxheart and a blocky pepper-like form - very interesting! 3.75 lbs/plant. Regular leaf. Indeterminate. 91 days.		OP/H?
	Guido	120	Large red 8-16 oz fruit, very meaty with great flavour, can be used easily as a slicer or a sauce tomato. Regular leaf plant. 80 days	Introduced in the Seed Savers 2007 Yearbook by Val and Dan McMurray of Wynndel, BC, Canada, who got the seeds from R.R. Bruijn, The Netherlands.	OP/H?
	Hahms Gelbe Topftomate	29	Extremely small 6" dwarf cherry tomato plant. Good production of tasty yellow fruit, Introduced by Reinhard Kraft, Neukirchen, Germany. Rugose foliage. Determinate. 65-70 days.	Introduced by Reinhard Kraft, Neukirchen, Germany.	OP/H?
	Halicz	314	Ovate, red fruit. Small plant. Early production. Determinate. Regular leaf. Some radial cracking.	Donated to PGRC in 1993 from Poland.	OP/H?
	Hana	277	2-2.5ft plants produce 2-3" oblate/spherical red fruit. Meaty flesh with small seed cavities. Regular leaf. Determinate. Early season.	Developed in Czechoslovakia.	OP
	Harbinger	30	Reportedly very good for ripening off the vine. Classic tomato flavour. Does well in cool/wet areas as it was bred for the British climate. Heat delays production. Regular leaf. Indeterminate. 60 days.	English variety, introduced to the market in 1910.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Henderson's Pink Ponderosa (Henderson's Ponderosa)	229	8-12oz pink meaty fruit, sweet mild flavour. Fruit is slightly irregular and flat. Regular leaf. Indeterminate. 85-90 days.	Introduced by Peter Henderson & Co. in 1891.	H
	Herb Taylor Golden	313	Oblate, pleated fruit. Orange skin. Good leaf coverage. Mid-season. Indeterminate. Regular leaf.	Donated to PGRC in 1991 from Virginia, USA.	OP/H?
	Homestead	235	Uniform market-type, all purpose tomato. Red beefsteak-type fruit, 4-8oz each. Good production, good flavour. BER and split resistant. Determinate. Regular leaf. 65-75 days.	Bred by Florida Agric. Expt. Sta. and the Southeastern Breeding Laboratory, USDA, Charleston, South Carolina. ((Victor x Dobbies Champion) x Pan America x Rutgers) - released around 1950.	OP
	Huang Se Chieh	161	Round yellow fruit. Early to mid season production.	Obtained at the Botanical Garden, Peiping, Feb. 24, 1931. Donated to USDA in 1931	H
	Humph	194	Ind. RL plant. 5-10 oz green fruit with amber blush. Smooth texture.	Nancy Kirch of Binghamton, NY, discovered this tomato at a local nursery. Original seed came from one of the nursery employees who grew it as a family heirloom.	H
	Hurma (Khurma Ukrainian)	244	Plant produces large, golden fruit, oblate shaped. Excellent for fresh use, sweet flavour. 3-7oz . 85 days.	Originally from the Ukraine.	H
	Isis Candy	31	1 oz cherry tomato, yellow/orange with a pink blush when ripe. Firm flesh, large seed cavities, moderate yields. Indeterminate. Regular leaf. 75-80 days.	Bred by Joe Bratka of NJ, one parent is Marizol Purple. Joe Bratka introduced it through SSE in 1992.	OP
	Ispolin Malinovy	201	Oblate dark pink fruit. Indeterminate. Very productive. Firm fruit, nice flavour. Non-uniform fruit with some radial cracking. Indeterminate. Regular leaf. 82 days.	From Siberia.	OP/H?
	Italian Noire	274	Oval grape-type fruit with brown skin and green shoulders. Good flavour. 70 days.		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Italian Winter	136	Stocky plant produces round, yellow 2" fruit. Some blossom drop. Doesn't like really cold weather. Regular leaf. 75 days. Indeterminate.	Donated to PGRC in 1970 from Italy.	H
	Jack White	92	Large, white 8-12oz yellow/white fruit. Cross between White Tomesol x Great White x White Beauty. Regular Leaf, 80 days.	Bred by Alan Bishop of Hipgnosis Seed. A stabilized cross White Beauty x White Tomesol. Named after Jack White, lead singer of the White Stripes band	OP
	Japanese Black Trifele (Yaponskiy Trufel Chernyi)	32	Produces 4-7oz pear shaped fruit with dark brown/black skin. Very good flavour, good producer. Some green shouldering. Potato leaf. Indeterminate. 70-80 days.	Russian OP variety.	OP
	Jaune Flamme	33	Deep orange skin, fruit 2-3oz each, borne in clusters on the vine. Sharp taste, excellent flavour. Regular Leaf. Indeterminate 75 days.	French family heirloom, originating from Norbert Parreira of Helliner, France. Name means 'Firey Yellow'.	H
	Jitomate Bulito	240	Produces elongated, 3" long red fruit. Used for fresh uses and preservation. Point on the blossom end. Semi-determinate. RL. 85 days.	Reportedly Mexican heirloom used by that Zapotec people.	H
	Joffre	34	Black/purple fruit with green shoulders and reportedly very good flavour. Regular leaf. Indeterminate. 75 days.	French OP, possibly heirloom variety said to be named after a WWI French field marshall.	OP/H?
	Jubilee (Orange Jubilee)	151			H
	Karlik	307	Indeterminate, reg leaf variety. Marbled(?) skin. Early production, good yield. Oblate fruit.	Originally collected from the former Soviet Union in Moscow, introduced to the USA via a donation to the USDA. Then donated to PGRC in 1965.	H
	Kazakh Schalavije	97	Good production of 6-12oz orange fruit with excellent flavour. Regular leaf. Indeterminante. Rare.	The name implies it may have originated in Kazakhstan (a republic in the former USSR, now an independent country). Variety brought to SSE from CV Anioleka Seeds of Scotland.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Keeping Tom	35	Heralded for its keeping properties, will keep for many months if picked green and kept in a cold cellar. Small Indeterminate plant, productive tomato, that ripens slowly and stays in good shape long after harvesting. May Be picked part ripe and will ripen slowly in cool place. Oddly, it may often appear unripe, but when cut it will be bright red. Indeterminate. Regular leaf.		OP/H?
	Kimberley	36	Early, tall and sprawling plant, high yields of 1-2" round red fruit, slightly oblong. Indeterminate. Potato leaf. 55-60 days.	Named after Kimberley, BC where it was bred in the 1980's (parentage is disputed).	OP
	King Humbert (King Umberto, Roi Humbert, Re Humbert)	184	80 days.	Old Italian paste tomato. Described as far back as 1885.	H
	Kolea	163	Red, 4" diameter fruit. Regular leaf.	Donated from the University of Hawaii to the USDA in 1962.	H
	Kootenai	91	Very early compact plant, produces slightly oblate 2-2.5" red fruit. Moderate to good production, sweet juicy fruit. Determinate, 60 days, rugose leaf.	Brought to the Kootenay region of BC with Russian Doukhobor settlers.	H
	Kotlas	295	Plant produces good harvests of red fruit, some more spherical, but others with a point at the blossom end. Good flavour, 1-2oz fruit. Compact plant, can be grown in 5gal containers. Potato leaf. Indeterminate. Early season.	Originally named Sprint, but changed to Kotlas by Johnny's Selected Seeds upon Kotlas becoming a sister city with Waterville, ME, USA.	H
	Lambert's General Grant	37	This very old heirloom has large rose-pink fruit that are oblate and ridged. Vine ripened fruit have the best flavor. Indeterminate, finely dissected foliage. 85 days.	Developed by a gardener named Mr. Lambert in Bellefonte, Pennsylvania in 1869.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Lancia X (PSB-3)	94	Indeterminate. Oxhart type, good fresh or for paste. Unable to contact donater of seed, but growth was not like that of Lancia, indicating a natural cross between 'Lancia' and an unknown parent. Beautiful, jewel toned pink fruit with some light yellow shouldering, rich, full flavour (especially for a pink!). Buttery-textured soft flesh. Regular leaf. Later maturity - 85-90 days.	Italy 1950.	OP
	Lattanzio Pendulous	125	Good flavour, only moderate production of red beefstake oblate fruit. Doesn't like wet weather. Indeterminate. Potato leaf. 80 days		OP/H?
	Legend	38	4" in diameter slightly oblate red fruit. Mild flavour, especially for a red, meaty with few seeds. Blight and crack resistant. Regular leaf. Indeterminate, 75 days.	Developed by Dr. James Baggett at Oregon State University.	OP
	Limbaugh's Legacy Potato Top (Potato Top)	87	Large production of 10-18oz pink flattened globe fruit. Potato leaf. 85 days.	A family heirloom that originated from Fred Limbaugh of Robinson, Pennsylvania. Fred's father and grandfather raised it in the 1930s; Pittsburgh's own heirloom tomato.	H
	Lime Green Salad (Green Elf)	272	Dwarf plant, grows about 2.5ft high. Produces round green tomatoes 1-3oz each. Sharp, tart flavour. Regular leaf. Determinate. 80 days.	Bred by Tom Wagner in the 1980's.	OP
	Lister's Protection (Lister's Perfection)	334	Round, medium sized red fruit. Reportedly best when fruit is slightly underripe - deep orange with a green blush at the stem end. Indeterminate	Originally donated to the HSL (UK) by JR McIvor, whose father and grandfather has grown it from around 1926 in their market garden in at Carriden, Bo'ness (approx 57 miles from Dundee). Originally a greenhouse variety.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Little Lucky	153	Golden-yellow fruit with a red blush at the blossom end. Complex fruity/tangy flavour. Potato leaf. Indeterminate. 90 days.	Craig LeHoullier who stabilized it from an accidental cross between 'Brandywine' and an unknown variety.	OP
	Livingston's Perfection	103	Red globular fruit 4-8oz each, excellent flavour, smooth and productive. Indeterminate. Regular Leaf. 75 days.	Commercial heirloom, released in 1880 by A.W. Livingston.	H
	Lucky Leprechaun	205	Plant produces 2-4oz round red uniform fruit. Mild flavour, but reportedly a very good producer. Plants reach about 2ft. High. Rugose leaf. Productive dwarf variety.	Irish heirloom. Dates back to early 1900's.	H
	Lunchbucket (Lunch Bucket)	166	Small saladette type tomato, red tender skins, said to have a spicy/salty flavour.		OP/H?
	Lyana	300	Plant produces good harvests of 1-2oz round, red fruit. Meaty with small seed cavities. Strong tomato flavour. Plant grows about 2-2.25ft tall, good for growing in containers. RL, determinate, 55-70 days.	Moldovan var., bred by Pridnestrovian Agric. Res. Inst., (Leto x Cheburashka) x Start cross. Released in 1996.	OP
	Malinovyj Ozarowski	322			H
	Mama Leone	100	Produces high yields of 3-6oz plum-type fruit. Very good flavour, excellent for preservation. Regular leaf. Indeterminate. 80 days.	Introduced to SSE by Nancy Kirch, New York, in 2005. Nancy obtained it from a local nursery in NY, originally from a customer who immigrated here from Italy with the seeds many years ago.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Manitoba	39	Early determinate variety bred for the short seasoned prairies. Very good variety for cool climates and short seasons, if in high-heat temps it will delay production, but doesn't seem to hamper it. good flavour and excellent yields. 2-6oz (reports of 10-14oz) each, red globular fruit, tart flavour. Determinate. regular leaf. 65 days.	Breeder and vendor: Expt. Farm, Morden, Manitoba, Canada. Parentage: (Marglobe x Bounty) x Redskin. Adaptation: Southern Canadian prairies. 1956.	H
	Mary's Austrian X (PSB-1)	241	Plant did not come true to package. Conversation with seed seller indicated that this variety was not a mislabel, it is a cross that occurred naturally between Mary's Austrian and an unknown cherry variety. Delicious grape-sized pink jeweled fruit on a large (5ft+) plant. Fruit borne on trusses of 5-6 fruit. Sweet, rich flavour with firm flesh. RL. 75-80 days.	Heirloom originally from Austria, came to Salt Spring Island, BC in the early 1900's, and grown their by the same family by over 100 years.	OP
	Matina	304	Reliable producer of red 1.5-3oz fruit. Similar in growth and colour to 'Stupice' and 'Bloody Butcher' but a darker shade of red. Balanced flavour. Very early - does well in colder and wet weather. Potato leaf, indeterminate, 65 days.	Heirloom from Germany.	H
	Matt's Wild Cherry	171	Rampant vines produce prolific amounts of small, currant type tomatoes. Excellent tart full flavour, fruit approximately 2gr each. Regular leave. Indeterminate. 70 days.	Originated from Mexico where it grows wild. Teresa Arellanos de Mena, a friend of Maine Ag. Faculty's Dr. Laura Merrick and Dr. Matt Liebman, brought seed to Maine from her family in Hidalgo in Eastern Mexico.	H
	Mexican Cocktail	197	Ind. RL plant. Tiny red currant tomatoes. Disease tolerance exhibited. Large, sprawling growth habit. Early maturity.		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Michael Pollan	238	Green & yellow/gold striped fruit, slightly elongated and plum shaped approximately 3" long. 5ft vines. Sweet, mild flavour.	Grown and selected by Wild Boar Farms in California, USA.	OP
	Moldovan Green	258	6-8oz green fruit with a yellow blush. Smooth texture. Sweet/tart flavour. Regular leaf. Indeterminate. 75-80 days.	Heirloom from Moldova. Introduced to North America by Glenn Drowns of Iowa, USA.	H
	Morado del Rincon de Ademuz	248	Pink/purple beefsteak tomato.	Spanish for 'Purple from Ademuz'.	OP/H?
	Moranno de Mejorada	253	Big, round red fruit. Strong, dense plant.	Spanish for 'Moorish from Mejorada'	H
	Moskvich (Moskovich, Moskvic, Moskovic)	41	70-75 days, indeterminate, regular leafed plant. Good sized 10-14oz fruit. Excellent flavour, very meaty. Good for canning as well. Does well in high heat with water restrictions, only a bit of cracking. Your classic looking tomato. Needs heavy staking to accommodate the large fruit. 5.5lb/plant.	From Russian it is translated to "person who lives in Moscow". Developed in the 1970's by Vavilov Institute (IOGEN, Moscow).	OP
	Mountain Princess	289	Plant produces 6-8oz red smooth beefsteak-type fruit. Determinate. RL. 65 days.	An heirloom grown for generations in the mountain climate of the Monongahela National Forest Region of West Virginia.	H
	Mr. Fumarole (Mr. Fumo)	299	Plant produces elongated, 3-6" red fruit, with pinkish/red skin. Paste variety. Low production. Heat delays fruiting. 65 days.		OP/H?
	Negrillo de Almoguera	256	Black beefsteak fruit. Excellent flavour.	From the area of Almoguera, Guadalajara, Spain.	H
	Negro de Jaen	249	Black beefsteak fruit. Good taste. Late harvest.	Spanish for 'Black from Jaen'. From the area of Jaen, Spain.	OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Neves Azurean Red	199	Oblate, large beefsteak type fruit. Approx. 13-16 oz in size. Regular leaf. Indeterminate. 80 days.	Seeds were collected by Carolyn Male (NY MA C) in 1999 from a retired P.E. teacher Chuck Perry, who got the seeds from his cousin, Ed McCollum of Boston, who, in turn, got the seed from the owner/founder of the Neptune Harvest Co. Dr. Carolyn Male contacted the Neptune Harvest founder, and he said that a man came to the factory and asked if he could trade tomato fruits for seaweed fertilizer. This man was Anthony Neves of Massachusetts (now deceased), who brought the seed from the Azores, where he had been selecting for larger size, and he continued the selection in Massachusetts.	OP/H?
	Nonna Antonina	252	Red beefsteak fruit, very productive. Regular leaf. Indeterminate.	Italian for 'Grandma Antonina'. Italian family heirloom from Sara Porporato and Jörg-M. Schröter, Volvera, Italy from Sara's grandmother, who grew the tomato for more than 40 years.	H
	Novocserkaszkij	309	Blemish free red oblate fruit with some darkening and ribbing at the shoulders. Great classic tomato flavour, not too sweet. Strong, stout bushy plant. High temps during the later half of summer seemed to have delayed ripening, but still produced really well. Semi-determinate. Regular leaf. 82 days.	Donated to PGRC in 1984.	OP/H?
	Oaxacan Jewel	181	Large fruit, 6-16oz, golden yellow with red and orange marbling. 80 days. Regular leaf. Ind.	Pre-Columbian Mexican variety.	H
	Ojo de Venado	198	Oval red cherry, balanced rich taste. Productive 4' tall plants. 80 days.	Reportedly grown by the Zapotec people of Mexico, from Sierra Madre del Sur. Name translates as 'Eye of the Deer'.	OP/H?
	Orange King	155	Orange, meaty fruit.	Donated from an unknown source in 1961 from New Hampshire, USA to the USDA.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Orange Oxheart	42	Large 12-16oz fruit, oxheart shape, firm flesh and few seeds. Regular leaf. Indeterminate. 80 days.		OP/H?
	Orange Russian 117	236	Orange and pink heart shaped tomatoes. Crack resistant. Good harvest. Regular leaf. Indeterminate. 90 days.	Jeff Dawson's selection from his cross of Russian 117 and Georgia Streak.	OP
	Orange Strawberry	148	Extremely vigorous plant, grows up to 6-7ft tall (will grow visibly in one day alone). Produces large 1-2lb oxheart shaped golden orange fruits. Sweet & fruity and very flavourful. One of the best orange tomatoes out there. Grows very well in high heat, and resistant to cracks/splits. Regular leaf. 85 days. Indeterminate.	Seeds for what became Orange Strawberry were sent to Carolyn Male of Latham, New York, by Marjorie Morris of Indiana, who discovered it as a stray seed in a pack of commercial Pineapple seeds and named 'Orange Strawberry' based on the fruit shape and color.	OP
	Orlov Yellow	188	Ind. PL plants. 10-16 oz orange beefsteak-type fruit. Smooth shoulders, no core. Firm flesh. Very good flavour and very productive.	Seeds from Smolensk in Russia, said to have originated with Count Aleksei Orlov from the 18th century.	H
	OSU Blue	185	80 days. RL plant. Deep blue fruit the more sunlight they are under. Pinkish flesh.	Bred by Jim Myers of Oregon State University.	OP
	Paragon (Livingston Paragon, Livingston's Paragon)	275	Red spherical fruit, excellent yields of 3-4" fruit. Great for canning. Regular leaf. Indeterminate. 75 days.	Alexander Livingston's first breed of tomato, which was introduced in 1870. This variety was a mainstay of the New Jersey canning industry and reportedly was named for the Paragon canning jar of that era.	H
	Parma	310	Red, oblate, pleated(?) fruit. Early maturity, indeterminate. Large plant. Regular leaf.	Donated to PGRC in 1984.	OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Paul Robeson	43	Pleated/irregular brown-black-purple fruit. 7-15 oz each. Reportedly up to 2lbs. Very good flavour, fair yield. Regular leaf. Indeterminate. 70-75 days.	Russian heirloom which was made available by Marina Danilenko, a Moscow seedswoman; named in honor of the black opera singer star of King Solomon's Mines, 1937, Paul Robeson, who was also an advocate of equal rights for Blacks and was very popular in the former Soviet Union.	H
	Perennial	158	Small bright yellow fruit. Regular	Originally from the Dr. H.L. Blood Collection No. 823. F.R. Lawson, Modesto Calif. 1936. Donated to USDA in 1966.	H
	Perestroika	44	Red-orange uniform smooth fruit, solid 8-10oz meaty with few seeds. A market favourite. Indeterminate. Regular leaf. 70 days.	Russian variety from Siberia. Perestroika is the Russian term (now used in English) for the economic reforms introduced in June 1985 by the Soviet leader Mikhail Gorbachev. Its literal meaning is "restructuring", referring to the restructuring of the Soviet economy.	OP
	Persimmon	45	Deep yellow/orange fruit. Vigorous vine. 1lb+ beefsteak fruit. Dates back to the mid-1800's. Meaty and sweet. Regular leaf. Indeterminate. 80 days.	Reportedly dates back to the mid 1800's - although no information can found.	OP/H?
	Perth Pride	287	Smaller plant (3-4ft) produces smooth round 2-5oz fruit that ripen to a deeper purple colour. Very good flavour. Fruit does not keep well after picking. RL (rugose) leaf, indeterminate. 70-75 days.	Developed in the 2006-2011 by the members of the Dwarf Tomato Project from a cross between New Big Dwarf and Paul Robeson, made in 2006 by Patrina Nuske Small in Australia and named Happy. This tomato was selected and named by Tessa Millesse who lives in Perth, Western Australia.	OP
	Peruvian Bush	318			H
	Pink Accordion	107	Plant produces average yields of heavily pleated and ribbed red fruit. Large sprawling plants that require good staking, fruit is approximately 1lb each. Hollow with a mild sweet flavour. Indeterminate. Regular leaf. 80 days.		OP

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Pink Zebra	46	Dark red/brown striped with green. Extremely tasty, although did not do well for me in grow out in 2011. Grew very well in 2014. Likes drier climates, very tasty and meaty fruit. 85 days. Regular leaf.	Possibly a misnamed variety?	OP/H?
	Pixie	98	There are several varieties with the name 'Pixie' in them, a grow out will have to be done to determine which 'Pixie' this is.		OP/H?
	Platillo	175	Large oblate, heavily ribbed fruit. Good flavour, orangey-red skin with slight mottling, and orangey flesh. Fruit is approx 220gr each (8 oz). Best for fresh eating. Moderate leaf coverage. Regular leaf, indeterminate, 80-85 days.	Collected in 1966 from Puerto Rico and donated to PGRC.	H
	Plum Tigris (Slivovidnyi Polosatyi)	47	Regular leaf plant with a high yield of 4 oz plum fruit with red and yellow skin, very good flavor. 80 days.	introduced to North America by Andrey Baranovski, Minsk, Belarus.	OP
	Pocomoke	157	Deep red fruit, uniform and smooth in shape. Crack resistant, slight catfacing. High degree of tolerance to fusarium wilt. Determinate.	Donated to the USDA in 1962 by the University of Maryland.	H
	Polish Linguisa	88	Elongated red, paste type tomato. Wispy plant. 5-6" long dry red fruit. Sweet flavour. Good productivity. Semi-determinate. Regular leaf. Late harvest.	Heirloom variety from Poland, brought to New York by a family of Polish immigrants in the late 19th century.	H
	Pollock	247	Plant produces uniform globe-shaped 4-6oz fruit with very good flavour. Compact plant, still requires staking. Regular leaf. Indeterminate. 70 days.	A selection from Bonny Best for earliness, productivity and good cores by Andy Pollock of northern British Columbia, Canada.	OP
	Poma Amoris Minora Lutea	173	Stout plant produces moderate harvests of 5-8oz pale yellow fruit. Good flavour. Does not like being kept wet. 75 days.		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Portuguese Joe's (Joe's Portuguese)	246	Large tomatoes, very irregular and heavily pleated fruit. Very good flavour. 8-18oz fruit. Indeterminate. 80-85 days. Regular leaf.	Portuguese variety, named by Val and Dan McMurray (B.C MC D). Dan picked the seeds out of a salad in Portugal in the late 1990s or early 2000s, and they have been growing this variety in their garden since then.	OP/H?
	Prairie Fire	214	Early determinate red variety, globular and slightly oblate in shape. Good flavour. 70 days. Regular leaf. Determinate	Possible cross between Sub-Arctic and an unknown beefsteak. First listed in SSE in 1992.	OP
	Prairie Pride	215	70 days.	Released from the University of Manitoba in 1978.	OP
	Primrose Gage	160	Described has having a sweet/tart flavour. Small round yellow fruit.	Collected in 1931 by Dobbie and Co. (Edinburgh, Scotland, UK) in the village of a seminomadic tribe in the jungle of southern India between 5,000 and 8,000 feet altitude.	H
	Principe X (PSB-6)	99	Semi-determinate bushy plants produce plum-type fruit, excellent for preservation and pastes. Fruit is red with a tip at the bottom, plant is prolific in yields. Regular leaf. Midseason.	Italian heirloom bred for sun-drying. Dates back to the 1910s.	H
	Pruden's Purple (Prudence Purple)	76	Indeterminate potato-leaved plant. 75-85 days. Plant produces dark pink beefsteak fruit, sweet flavour with smooth texture. Fruit measures 10 - 16oz, moderate to good yields.	Variety dates back to at least the 19th century.	H
	Purple Calabash	142	Deeply fruited/pleated pinkish/purplish/brown fruit with green flesh and gel. Touted as the world's "ugliest tomato". Indeterminate. 85-90 days. Regular leaf.	Exact history is unknown, but evidence suggests it was originally from Mexico. Very old variety. Donated to the USDA in 1963.	H
	Purple Plum Paste	179	Large, ind. Paste. Good flavour. RL. 80 days.		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Purple Prince (Black Prince)	48	RL plant, produces tennis ball sized brown/dark purple fruit. Slightly ovular in shape. 3-4oz each. Quite tasty, but didn't seem to withstand really high heat and water rationing very well. Poor production in my area. 80-85 days.	Reportedly an heirloom from Siberia.	OP/H?
	Purple Russian	49	Plum-type shape, although quite juicy so not appropriate for pastes. Brownish-pink fruit, some green shouldering. Very good flavour. Heavy production. Regular leaf. Indeterminate 75 days.	Heirloom variety from the Ukraine. Seed are originally from Irma Henkel, 1980 and then introduced to North American market.	H
	Radinilee	280	Plants produce 2-6oz black/purple fruit, shape ranging from oblate to more spherical. Somewhat irregular shape. Some green shouldering. Very good flavour. RL, indeterminate, 80 days.	Reportedly from Russia, but the name is not of Russian origin. Unclear whether it was just renamed, or if it is not actually from Russia.	OP/H?
	Red Robin	77	Small dwarf plant, growing to approximately 25-30cm high. Well suited to containers. Produces tight clusters of 6-8 red cherry tomatoes. Good production. Said to be able to produce under even poor light conditions. Determinate, regular leaf, 55-60 days.		OP
	Reisetomate	271	Plant produces heavily lobed fruit that resemble cherry tomatoes all fused together. Fair flavour. Regular leaf. Indeterminate. 80 days.	German heirloom?	OP/H?
	Reverand Morrow's Long Keeper	257	Plants produce 6-10oz reddish orange fruit. Determinate. Midseason. Regular leaf.	Louisiana Heirloom?	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Rita's Black	327	Really more of a dark red/brown/mahogany than a black fruit. Sweet flavour, very meaty with tart skin. Some susceptibility to cracking in downpours. Potato leaf, indeterminate.	Val and Dan McMurray (B.C MC D), who actively exchanged seeds with European growers, asked Rita De Clereq in Belgium to try and get hold of some of the local Belgium "heirlooms" or family varieties when they started trading with her. She found four varieties, two of which appeared to be the same, and which were later named Belgian Farmer's Beefsteak, Belgian Pounder and Belgian Heart, as the original names have long since been forgotten. Rita's Black was a spot of Belgian Pounder, and it was named after Rita De Clereq.	H
	Robson Angolan	319			OP/H?
	Roma VF	50	RL, det. Plant. Good production of plum shaped fruit. Best for sauces, canning, and preserving. Very dry. VF resistance. 70 days.		OP
	Rosado de Aracena	250	Beefsteak pink tomato, strong sprawling plant. Slightly oblate shape. Late harvest.	Spanish for 'Pink from Aracena'. Traditional in the villages in the mountainous area of Aracena y Ricos de Arodre in the south of Spain.	H
	Rosado de Teruel	255	Pink beefsteak fruit.	Spanish for 'Pink from Teruel'. From the town of Teruel, Spain.	H
	Rose	51	Large pink, irregular beefsteak-type fruit. Very good flavour, 3" 10oz fruit. Reportedly a cross between Brandywine and Rutgers tomatoes, crack and disease resistant. Indeterminate. Regular leaf. 80 days.	Amish heirloom from New Holland, PA, USA.	H
	Rose d'Eauze	331	Very late variety - might possibly be weather related, but really best grown in a longer season climate. Pink heart-shaped fruit with mild flavour. Regular leaf. Indeterminate 90+ days.		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Rozovye Gryozy	284	Plants produce large pink oval-shaped fruit, approx 11oz each. Excellent flavour. Wispy foliage. Regular leaf. Indeterminate. Early season.	Introduced in North America by BC KO T, who received the seeds from Tatiana Afanasieva, an avid gardener and seed saver from Chelyabinsk, Russia. Not commercially available in Russia. Name translates to "Pink Dreams" from Russian.	OP/H?
	Rozovyi Izumnyi	196	Ind. RL, high yield. Large pink beefsteak-type fruit up to 1lb. Juicy, sweet flavour. 80 days.	History unknown. Seeds acquired from Russia. Translates to Pink Raisin-like from Russian.	OP/H?
	Ruby Treasure	52	Winter keeping variety, will keep for a few months in a cold cellar and ripen slowly if picked green for storage. Red fruit, firm with smooth skin, retains excellent flavour and colour for storage. Excellent producer - heat doesn't slow it down. Indeterminate. Regular leaf. 85 days.	Peters Seed Research breeding programme.	OP
	Russian Persimmon	143	Plant produces 4-8 oz orange fruit with sweet flavour. Very productive plant. Determinate, regular leaf, 80 days.	From Russia.	OP/H?
	Russian Saskatchewan	292	Compact, dwarf plants produce good harvests of red, spherical fruit. Rugose RL, determinate, 60 days.	An old heirloom variety that has been grown by Darlene MacMillan's family for many years in Colfax, Saskatchewan and originally came from Russia.	H
	Saint Pierre	178	All that's available on this one is that it has an oblate shape, is bi- or tri-coloured (red/orange/yellow) and that it's late maturing.	Originally from France, given to a collector in Alberta in 1966, then donated to PGRC in 1974.	H
	Salt Spring Sunrise	202	Bushy small plant, produces small red slicers. 3-4' plants. Good taste. Good for costal locations. Determinate.	Developed by the late P.J. (Jack) James, agricultural consultant of Salt Spring Island, British Columbia, Canada, in the 1950-60s.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	San Francisco Fog	54	Tomato specially bred fro cool, wet climates. Red globular, 2-3" in diameter, 2-4oz fruit. Plants grow 7-8ft, slightly more acidic than sweet taste, vigorous production, good resistance to BER and splitting. Regular leaf. Indeterminate, 80 days.		OP
	Sasha's Altai (Sasha's Pride)	55	Round, red globular fruit, very flavourful and good for fresh eating and preservation. Fruit sets in cooler climates easily. Indeterminate. Regular leaf. 60 days.	Russian heirloom from the Altai Mountains. For full history see here: http://www.seedstrust.com/st/sasha.html	H
	Scatalone	243	San Marzano-like paste/plum type variety. Excellent flavour. Good for canning and sauces.		OP/H?
	Schappis Küsnachter Alpenglühn (Schappiskusnachter)	285	Plants produce flattened and fluted 2-4oz red fruit. Strong flavour, more acidic than sweet. Prolific bloomer. RL, indeterminate, early season.	Originally from Austria, dates at least to the early 1960/61.	H
	Scotland Yellow	335	Sturdy vigorous plant with golden yellow, golf ball sized fruit produced in trusses. Early producing, soft skin, and a sweet/tangy flavour.	Sourced by L. Gaffney from the HSL, with no notes provided from HSL as to origins.	OP/H?
	Scr 5	177	A late maturing red oblate fruit, regular leaf.	Collected from the Canary Islands of Spain in 1986 and given to PGRC.	OP/H?
	Sherkhan	279	Dwarf plants produce long, sausage shaped fruit, red with orange striping. Very dry flesh and few seeds. 3-6oz each. Good acidic flavour. Good cooking tomato. Regular leaf. Determinate.	Russian commercial variety, vended by CV Gavrish. Introduced commercially to North America by Tatiana's TomatoBase. Name means "Shere Khan" in Russian, referencing the tiger in "The Jungle Book" by Rudyard Kipling.	OP

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Shokoladnyi (Wokoladnyj, Chocolate, Russian Chocolate)	90	Plant produces excellent yields of 4-12oz black/reddish fruit. Some green shouldering, smokey rich flavour, resistant to cracking and BER. 70-80 days. Indeterminate, regular leaf.	Russian commercial var., introduced to NA by Andrey Baranovski of Minsk, Belarus in the late 2000s as Russian Chocolate.	OP
	Shuntukski Velikan	190	Ind. RL. Large, pink oblate beefsteak-type fruit. 12-16oz. Meaty fruit with lots of seeds. Early for such a large-fruited variety. Very productive. Reliable producer in cooler areas.	"Velikan" means Giant from Russian. Possibly originates from Shuntut, Russia.	OP/H?
	Sibirskiy Velikan Rozovyi	189	Ind. RL. Large, pink oblate beefsteak-type fruit. 12-16oz. Meaty fruit with lots of seeds. Early for such a large-fruited variety. Very productive. Reliable producer in cooler and warmer areas. 80 days.	From Siberia. Translates to "Siberian Giant Pink" from Russian.	OP/H?
	Sicilian Saucer	56	Large, ribbed, very irregular shape, very good flavour, few seeds, excellent for sauces and preservation. Fruit up to 1lb. Regular leaf. Indeterminate. 85 days.	Family heirloom from Italy that has been passed around by Mr. Cook, from Mississauga. Mr. Cook received the seed from his Sicilian neighbor who has had it in his family for generations. First listed in SSE in 2008.	H
	Silvery Fir Tree	126	Extremely hearty plant, about 2ft high. Has carrot like delicate foliage. Excellent production in a range of temperatures, it's not abnormal for me to get 10+ lbs from this little plant. Red oblate fruit, first of the season are larger (about 3-4" in diameter) while the rest are smaller (2-3" in diameter). Fruit weighs about 8oz each. Does well in heat and as much sun as possible, but also produces well in rainier or colder seasons. Perfect for slicing, but does make a great sauce. Determinate. 68 days.	Traditional Russian variety attributed to Moscow seedswoman Marina Danilenko, brought to US by SSE in early 1990s.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Sirius	311	Early determinate variety. Large plants, red spherical fruit. Regular leaf.	Donated to PGRC in 1985.	OP
	Slavic Masterpiece	57	4-8 oz red round meaty fruit. Vigorous 6ft+ plants. Good resistance to splits. Good taste, good acid/sweet balance. Indeterminate, 75 days.	Russian commercial open-pollinated tomato, introduced to North American by Andrey Baranovski of Minsk, Belarus under the translated name.	OP
	Snow White	231	Light yellow cherry-type tomato. Crack resistant. Strong, tall vines, require good staking. Very good yields. Indeterminate. Regular leaf. 65 days.	Developed by Joe Bratka of New Jersey.	OP
	Sophie's Choice	128	Miniature tomato, grows about 1 - 1.5ft high at the most. Excellent producer for its size. First fruit of the season is quite large at about 3-4" in diameter, while the remaining fruit will be closer to 2. Good balance between meat and juice, excellent slicer and for fresh eating. Good well-rounded tomato flavour. Regular leaf. 60 days. Determinate.	A family heirloom from Edmonton in Alberta, Canada. Barry Comden of California offered this variety to Carolyn Male. It had no name, and Barry said that a friend of his in California had gotten it from someone in Edmonton, Canada. Carolyn asked Barry to name it and he deferred to his Californian friend who named it Sophie's Choice.	H
	Sputnik	283	Plants produce medium sized brown beefsteak fruit, 4-10oz each with good flavour. RL, indeterminate. 80 days.	First offered in the Seed Savers 1996 Yearbook by Arche Noah, a genetic preservation organization in Austria (AUST AR N), who got the seeds from Elmar Dolgener. Seeds originally from the USSR. Named after the Russian satellite launched in 1957.	OP/H?
	Striped Cavern (Red Cavern, Schimmeig Stoo, Lobed and Striped)	233	Stuffing tomato. Blocky, bell-pepper type shape. Red and orange striped. Moderate yields, moderate flavour, best used as a stuffing tomato or for salsa. Crack resistant. Regular leaf. Indeterminate. 80 days.	Bred by Thomas P. Wagner of Tater Mater Seeds	OP

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Striped Stuffer	182	80 days. Blocky, semihollow fruit - red with yellow stripes. 7 oz in weight. Indeterminate.		OP/H?
	Stupice	58	Early variety, compact plant, grows to around 4ft. Red globular tomatoes, wonderful flavour, sweet with a good acid balance. Potato-leaved. Always the first to appear and extremely productive in my garden. Indeterminate. 60 days.	Heirloom from Czechoslovakia.	H
	Sub Arctic Maxi	208	Plant produces red, smooth uniform fruit, globular shape. Approx. 2-5oz each, 2" in diameter. Good acidic tomato taste. Somewhat susceptible to blight. 65 days. Determinate. Regular leaf.	Developed by Dr. Harris at the Beaverlodge Res. Sta., Alberta, Canada. Released to the public in 1976.	OP
	Summer Cider	273	Yellow orange/peach skin with creamy flesh. Sweet fruity flavour. Fruit measures up to 1.5lbs, but is more commonly 10oz. Good flavour, early maturation for large variety. 75 days.	Bred by Tom Wagner of Everett, WA, USA. Originally called 'Apple Butter' by Everett.	OP
	Sunset's Red Horizon	137	Plant produces medium to large heart shaped fruit - 6-14 oz. Meaty, not juicy, flesh. Excellent balanced flavour. Regular leaf. Indeterminate. Mid-season.	Original seed stock is from 'Rostova', an heirloom to Russia. It was first offered by TomatoFest, but a cross happened some years back and instead of the beefsteak shape of Rustova, Sunset's Red Horizon became heart shaped. It is now considered a separate variety.	OP
	Sylvan Guame	124	Large, hearty plant, grows extremely well even in adverse conditions. Large red non-uniform red fruit, beefsteak shaped, 1-2lbs. Excellent flavour, very meaty and juicy with very few seeds. A great all around tomato. 80 days. Regular leaf. Indeterminate.	This tomato was named after a 80 year old man in Canada who shared the seeds and indicated that this variety came from Russia. Its original Russian name is not known.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Tangerine (Big Orange)	7	Large orange beefsteak fruit, bright orange in colour (hence the name). Good flavour and few seeds. Fruit weighs 1-2lbs each. Indeterminate. Regular leaf. 75 d		OP
	Tartar From Mongolstan	260	Tolerant of hot, cool, or humid climates. Good production of red-orange fruit slightly oblate in shape. Regular leaf. 70 days.	?	OP/H?
	Taxi	78	Small to medium sized plant, produces medium sized beefsteak-type yellow tomatoes. Determinate. Regular leaf. 70 days.	Possibly developed by Johnny's Selected Seeds - but that is unverified.	OP
	Tecumseh	156	Fusarium resistance. Susceptible to TMV. Late maturity, heavy fruit set. Indeterminate.	Developed at Purdue University, Lafayette, IN, USA. Donated to USDA 1959.	H
	Teta de Monja	251	Heart shaped pink fruit, wispy plant, with good fruit set.	Spanish for 'Nun's Breast'	H
	Thessaloniki	138	Plant produces uniform red globular fruit, excellent earthy/balanced/acidic flavour. Resists sun scald and cracking. Regular leaf. Indeterminate. 75 days.	Originally from Greece and introduced by Gleckler's Seedsmen in the 1950's.	H
	Tidlig Bush	306	Early, determinate. Marbled(?). Flat fruit shape. Smallish plant.	From Norway - Tidlig means "Early". Donated to PGRC from Alberta in 1974.	H
	Tigerella (Mr. Stripey)	59	4oz fruit, 2" in diameter. Skin is red with yellow-green streaks. Flesh is red-orange and quite tangy/tart. Regular leaf. Indeterminate, 76 days.	A cross of Ailsa Craig with an unknown variety. Bred by Glasshouse Research Institute in England in the 1930's.	H
	Tiny Tim	60	Dwarf tomato plant, reaches a maximum of 12" high. Can be grown in an 8" pot. Yields small braids of 3/4" red, round, cherry tomatoes. Regular leaf. Determinate. 50 days.	Developed by University of New Hampshire, Durham in 1945. Parantage: Window Box x Red Currant.	H

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Tlacolula Ribbed	61	Heavily pleated fruit, about 3" in diameter. Shade, heat, drought tolerant. Mild flavour, hollow. Red in colour. RL, indeterminate. 80-85 days.	Heirloom from Oaxaca, Mexico. Said to be unchanged and grown for generations in the Tlacolula region.	H
	Tomate	159	Early and heavy fruit set of small to medium sized dark red fruit. Extreme fasciation. Oblate shape. Regular leaf.	Originally purchased in the Market at Tarma, Peru. Elevation: 3048 meters. Donated to USDA in 1932.	H
	Tsygan (Zigan, Gypsy)	62	4-6oz black fruit. Vigorous 6ft+ plants. Smokey flavour more acid than sweet, meaty, good saucer. Rare in North America. Regular leaf. Indeterminate, 80 days.	Russian commercial variety, introduced to North America by Andrey Baranovski, Minsk Belarus in the early 2000s under its translated name, Gypsy	OP
	Uncle Charlie's Giant Italian Pear	180	Large, heart shaped pinkish-red fruit. Difficult to get to grow.	From Julianna's family, named after her Uncle Charlie who grew them	H
	Valencia	261	Plant produces round, orange fruit with good flavour. 3-6oz each. Regular leaf. Indeterminate. 80 days.	A selection from Sunray (which was a selection from Jubilee) from the 1940s.	H
	Val's Black Striped	281	Plant produces small round brown/black fruits with dark green striping. Meaty and firm fruit. 2 seed cavities filled with gel, large seeds. Good canner. RL, indeterminate, mid-season.	A mutation found in a group of 'Sascha's Altai' tomatoes in Dan & Val McMurray's tomato patch in 2005. Discovered by B.C KO T in 2009. Is stable. Named for Val McMurray.	OP
	Vandenbурgs Moneyma	122	Plant produces very uniform globular shaped 2" red fruit. Indeterminate. Regular leaf. 72 days.	Original seed donated to PGRC from Ontario, Canada in 1983.	OP/H?
	Variegated (Splash of Cream)	226	Produced globe-shaped red 2" fruit, inclusters of 5-6. Strong sprawling habit. Plant leaves are variegated green and light green. Indeterminate. Regular leaf. 80 days.	Introduced to North America by Greg Speichert of IN who received seeds from Ed Rasmussen, who had received his seeds from France. Variety has been shown to be grown in Ireland and the British Isles previous to France.	H
	Victoria	203	Semideterminate/indeterminate plant, block red 7 oz fruit. Early production. Good taste and texture. Potato leaf.		OP/H?

Common Name	Variety Name	Accession #	Growth Info	Historical Info	Heirloom/OP?
<u>Tomato</u>	Violet Jasper (Tzi Bi U)	227	Produces 2oz globe-shaped fruit, dark pink with green striping. Good flavour. Regular leaf. Indeterminate. 80 days.	First offered at Seed Savers 2009 Yearbook by Hristo Hristov of Bulgaria (BULG HR H) as Tzi Bi U.	OP/H?
	Vorlon	80	Large, indeterminate plant that requires good staking to hold the 10-18oz fruit off the ground. Deep brown/black fruit, with some green shouldering. Excellent flavour and high yields. Indeterminate, 75-80 days, potato leaf.	Stabilized accidental cross of Cherokee Purple x Pruden's Purple. Named after the race of aliens on Babylon 5.	OP
	Waltingers Fleisch aus Indien	282	Small round brown fruit, good flavour. 1-2oz each. Very good flavour. Some green shouldering. RL, indeterminate, 80 days.	First offered in the Seed Savers 2000 Yearbook by Seed Savers Heritage Farm, Decorah, Iowa (IA SSE HF), who acquired the seeds for this tomato and for other tomatoes of 'Waltingers' series from Nancy Arrowsmith of Austria (AUST AR N, later AZ AR N, as Mrs. Arrowsmith moved to Arizona).	OP/H?
	Wapsipinicon Peach	64	Small, ping pong sized fruit, yellow with a slight fuzz over the skin. Vigorous plants. Very sweet, low acidity. Regular leafed. Indeterminate, 80 days.	Originally came from Dennis Schlicht and was named after the Wapsipinicon river in Iowa.	OP
	Weeping Charley	82	Medium sized red fruit. Slightly roma/plum/elongated in shape with a tip on the blossom end. Others are rounder. Regular leaf. Indeterminate.		OP/H?
	Weissbehaarte	195	Ind. prolific, large plant (can grow up to 12' high). High yield of small light yellow round fruit, 1-2 oz, 2" wide. Mild, sweet flavour with a thick skin. Good for stuffing. 80 days.	Old German variety. Rare in North America.	H
	Wonder Lights (Plum Lemon)	66	Plant produces 2-4oz lemon shaped bright yellow fruit. Meaty, mild, and sweet flavour. Regular leaf. Indeterminate. 75 days.	Russian heirloom. Seed was collected from an old seedsman in Moscow, Russia.	H

<u>Tomato</u>	Yellow Lemon	67	Yellow globular fruit, sweet and juicy. 2-4oz fruit. Regular leaf. Indeterminate, 85 days.	Originally Collected from Karaj, Iran in January 1943 and donated to USDA in May 1943.	H
	Yellow Pear	68	RL, indeterminate plant. 4-5ft in height. Produces HUGE amounts of small yellow pear shaped cherry tomatoes. Really nice acidity, nice flavour. The only cherry I grow. Produces in bunches of 6-10 fruit per. 75 days. Heat, drought, humidity tolerant.	Very old heirloom variety, first described in 1805 by Persoon. Goes back to the 17th century.	H
	Yellow Perfection	69	Bright yellow 1-1.5" round thin-skinned fruit. Has a tendency to crack if overripe or overwatered. Potato leaf. Indeterminate 75 days.	Commercial heirloom from a British seed company. Dates back to 1890's.	H
	Yellow Ruffled	70	75-80 days, RL, indet., plant. Produces heavily ruffled lemon yellow fruit, 8-10oz each. Sweet flavour, not hollow, little bit of acidity. Good prod. In hot weather. 80 days.	First offered in SSE, no other information currently available.	OP
	Zapotec Pink Pleated (Zapotec, Zapotec Pink, Zapotec Pleated)	71	Large, pink heavily ribbed fruit, potentially the origin of all modern beefsteaks. Semi-hollow insides, excellent very distinct flavour. Regular leafed plant, extremely vigorous vines with sparse leaves. Indeterminate, 85 days	Heirloom from Oaxaca, Mexico, said to be originally grown by the Zapotec people.	H
	Zolotye Kupola	192	Ind. compact plant, RL wispy foliage. Heart shaped fruit. Yellow, sometimes with pinkish streaks, 8-20oz. Good flavour. Very few seeds.	Name translates as 'Golden Domes' from Russian. Russian commercial variety, developed in Siberia. Introduced to North America by Andrey Baranovski, Belarus.	OP/H?
	Zomu	146	Small determinate plant. Good production of 2-4 oz round red fruit. Good flavour with no BER or splitting. 70 days. Rugose leaf. Determinate	Might be a possible misspelling of 'Zomuk'.	OP/H?
